

## Overview of Group Objectives and Competence

The Process Systems Group's core competence is the supply of a process plant solution to a given client situation. This might require the complex customized plant with numerous products and optimized efficiency or a standard ULTRA Series<sup>®</sup> plant. This group's charter is to produce plants which meet or exceed a customer's requirements while ensuring the plants are delivered on-time and per contract documentation. Beyond this, AMCS reviews clients situations and provides the clients its insight from the depths of its experience.

Our PSG staff of highly skilled and experienced project managers, process engineers, detailed design engineers, and control engineers, applies specialized knowledge of the industrial gas industry to solve your unique process challenges with customized solutions. Our staff continues to create new innovative solutions for the planning, conceptual design, detailed design, fabrication, erection, commissioning and operating phases of projects.

PSG's guiding principle is to create value for a client. AMCS believes this is best achieved by providing input at the earliest stages of project development. As a representation of our output, AMCS wants to provide you with typical PSG provided plants.

## Typical PSG Provided Plants

- ULTRA-M<sup>™</sup> -ML Series Plant
- ULTRA-N<sup>™</sup> -NL Series Plant
- ULTRA-A<sup>™</sup> Series Plant
- ULTRA-AL<sup>™</sup> Series Plant
- ULTRA-O<sup>™</sup> Series Plant
- ULTRA-G<sup>™</sup> Series Plant
