AMCS Corporation enters into agreement with Shiprock Helium, LP to provide an INNOVA-HEU™ in Arizona

Bedminster, New Jersey, (October 10, 2016)

AMCS Corporation, a New Jersey based international supplier of process and industrial gases plants, announced it has entered into an agreement with Shiprock Helium LP, an innovative US based supplier of helium, to provide an INNOVA-HEU8™ Helium Extraction Unit for its project in Northeastern Arizona. The INNOVA-HEU8™ recovers helium from a gas stream consisting mainly of nitrogen. The plant offered is based on AMCS' proprietary state-of-the-art process technology which offers its clients superior performance through lower operating costs, high levels of automation, and higher helium recoveries. The plant is designed to produce high- purity Helium and Liquid Nitrogen. The INNOVA-HEU8™ plant design is highly packaged which significantly reduces field erection and installation time and costs. The INNOVA-HEU8™ product's sustainable design allows compliance with relevant environmental regulations by recovering green-house gases present in the feed-gas and extracting helium from the feed-gas using significantly less energy than competing processes.

"AMCS is delighted for the opportunity to supply Shiprock Helium LP with the INNOVA- HEU8™ plant. We value the confidence and trust that Shiprock management has placed in us; AMCS has worked with our client to optimize the plant and its product slate and thereby provide our client with a competitive edge." said Ishmael Chalabi President and CEO of AMCS Corporation.

Shiprock Helium LP is headquartered in Nacogdoches, Texas. Shiprock Helium and its affiliate, Nacogdoches Oil and Gas, have operated out of Nacogdoches since 1986 in six states. "Shiprock is pleased to be working with the professionals at AMCS. We have worked hard to find the right fit for our project and we believe the significant investment we have made with the AMCS team is well founded. This project represents a new processing strategy for the independent producer of this valuable commodity. We thank the engineers at AMCS for their professional and tailored work on our project" said Mike Finley, of Shiprock Helium LP.

AMCS Corporation supplies process plants and equipment to its clients in the industrial gases, energy, chemicals, environmental, electronics, pharmaceuticals, glass, and metals market sectors. Along with plants producing helium, hydrogen, oxygen, nitrogen, argon, neon, krypton, and xenon, AMCS supplies plants used for the production of LNG, natural gas, substitute natural gas, high-purity electronic gas, and ship board processes. As a full service company, AMCS has successfully executed turn-key projects in North America, Europe, South America, the Middle East, and the Far East. Information about AMCS' products, technology, and capabilities is available on its web site <http://www.amscorp.com>.
